INT.CL. : H04N 5/268

TITLE : VIDEO SWITCHING DEVICE

ABSTRACT : PROBLEM TO BE SOLVED: To display an input image on a video switcher while reducing it and to switch the input and output destinations through touch operation.

SOLUTION: The video signals of cameras 1a-1n are inputted to a video switcher 2, reduced by reduction parts 11a-11n and displayed on display parts 12a-12n. A character set by a setting part 16 is generated by a character signal generating part 19, synthesized with the video signals from the respective cameras by character synthesizing parts 13a-13n and inputted to an input switching part 14. The input switching part is formed from a touch panel on a display part, the input image is selected (switched) by the touch operation, and it is set (switched) through the touch operation of an output destination switching part 15 which one of monitors 3a-3m the selected image is outputted to. Thus, the setting part sets manual switching, automatic switching, which monitor the image is to be outputted to in the case of emergency occurrence, the character showing a video source or the like to be displayed in the image of each camera or the expanded display of one input image.
